

FDA Approved Detox Machine

Super-Foot-CLEANER

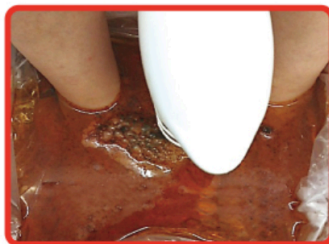

Over 4500 units
sold internationally

Price
SGD 5,968

For Both Salon & Individual Use

- Verified by the American **FDA** and Dr. Kenji Tazawa from Toyama University
- **No. 1** in Japan for Salon Installations
- **Scientifically Proved** (See Back for Official Data)

color of water shows your body condition & toxic release

Mind Fitness Co., Ltd

Product Overview

The prototype for this advanced detoxification technology was originally developed as a medical therapeutic device by Dr. Basba, a Tibetan physician, at the Basba Research Institute. Before its commercial release, clinical data from approximately 1,000 subjects were analyzed, successfully verifying its significant detoxification effects. In 2005, the technology achieved FDA approval in the U.S.

Leveraging this proven technology, the "GOD-CLEANER" brand was officially launched in Japan in 2006. Following its rapid success—with approximately 1,000 units installed within the first year—an upgraded model, the Super-Foot-CLEANER, was released in 2014. It remains the industry standard for professional detoxification today.

How It Works

1. Low-Frequency Electrical Stimulation

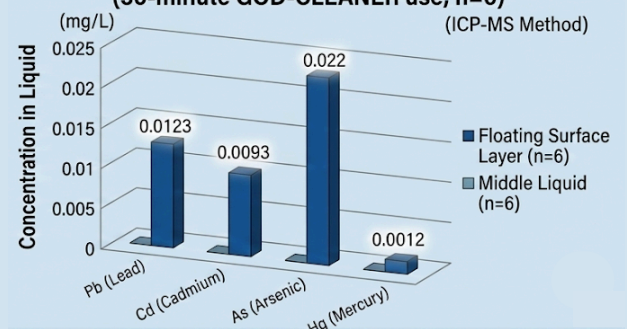

A specialized low-frequency current stimulates blood and lymphatic circulation, significantly boosting metabolic activity. This process triggers the rapid discharge of accumulated toxins—including heavy metals, chemical substances, food additives, and metabolic waste—through the soles of the feet in a short period.

2. Potential Balance Adjustment

Through advanced electrolysis, the water is transformed into high-concentration alkaline-reduced water (negative ions). This creates a potential difference between the body and the water, generating an ionic reaction. As the body's electrical potential balance is restored, toxins and waste products are drawn out and expelled into the water.

Scientific Data

Average Concentration of Toxic Heavy Metals in Middle Liquid and Floating Surface Layer (30-minute GOD-CLEANER use, n=6)
(ICP-MS Method)

❖ Conducted composition analysis on the detoxification of toxic heavy metals using the Super-Foot-CLEANER for 6 healthy subjects.

➡
❖ **RESULTS:** Observation of detection trends for abnormal levels of toxic heavy metals, specifically **ARSENIC, LEAD, MERCURY,** and **CADMIUM**, extracted from the sludge-like material floating on the water surface, not within the middle liquid.
